

## Application Services: Overview

Paradigm provides a full range of Application and System Engineering services to support your business. These services can integrate with related disciplines such as Business Process Improvement, Project Management, Systems Architecture, and IT Service Management to provide a full life-cycle solution to meet your business needs.

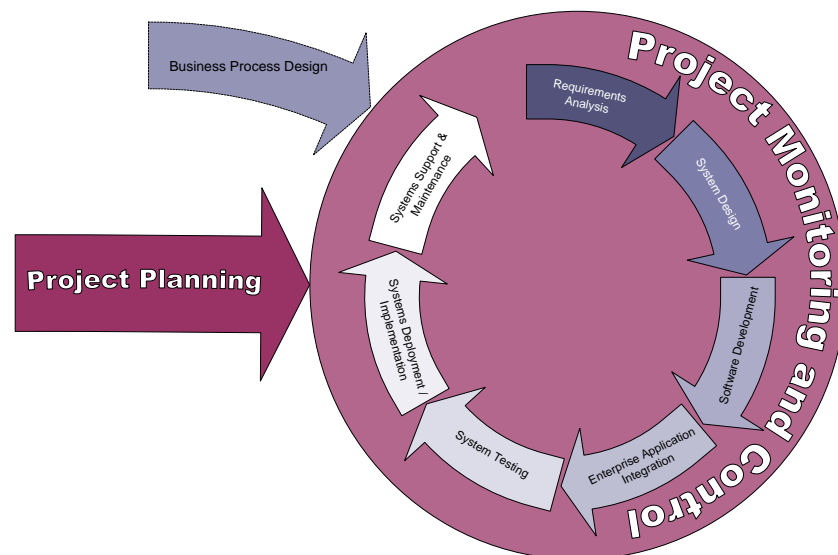

Our scope of services can range from providing individual resources to supplement your team with specific knowledge and skills, all the way up to full project teams that perform application project planning, management, and delivery.

Paradigm has a proven track record in the design, development, and implementation of industrial strength mission-critical applications for government and industry. We are technology-independent, meaning we can provide you with objective guidance in the selection and implementation of the best technological solution for your business. Paradigm can provide you with expertise in a variety of software environments, including Microsoft, Java, Oracle, and ERP systems.

**Our staff will work with you on your application initiatives, applying consistent and proven process discipline in the following phases of application development and maintenance:**

- Requirements Analysis
- System Design
- Software Development
- Software Package Selection & Implementation
- Enterprise Systems Integration
- System Testing
- System Deployment / Implementation
- System Support & Maintenance

Paradigm's methodologies and best practices are based on common industry standards and are easily tailored to integrate with or supplement your in-house methods. Our sources include [PMI®](#) for Project Management, [SEI CMMI®](#), [ISO 9000](#), and [UML™](#) for systems and software engineering, as well as [ITIL®](#) for systems support and maintenance.
