

## Application Services: Requirements Analysis

Paradigm has extensive experience and expertise in Requirements Analysis, whether it applies to application development projects, business process analysis, software package selection, or any other kind of asset procurement.

- The Paradigm Requirements Analysis process is highly customizable to any scenario
- Paradigm employs industry-standard documentation formats for Business Requirements based on UML™
- Individual requirements are subjected to rigorous validation against defined criteria to ensure they are clear, concise, unambiguous, and testable
- Requirements are also validated against each other to remove redundancies, group like requirements together, and resolve contradictions

### Typical Deliverables from Requirements Analysis:

- Use Case Diagrams (UML)
- Business process flows (Activity Diagrams (UML))
- Detailed functional business requirements (data fields, validation rules, processing rules)
- Detailed non-functional requirements (performance, reliability-availability- maintainability (RAM), usability, support, etc.)
- Request for proposal Documentation
- Package/system evaluation matrices
- Requirements Traceability Matrix (RTM)
