

Infrastructure Services

Services Overview - Technology Management:

Paradigm offers solutions that address the growing demand for high quality network-related services. Our consultants and analysts are network specialists who combine real-world experience with classroom training and an in-depth understanding of how technology is evolving to ensure the design process for your network results in the best possible solution for your budget.

Our recommendations reflect our own experience and knowledge and not a vendor-based bias, as we do not sell third party hardware or software solutions. We assess your requirements based on your unique challenges and present a solution that is not only technically sound, but also that meets your business needs.

Our services include supporting personal computer and network operating system software, along with the installation and/or upgrade of server and workstation software for office automation or business applications.

Our Services include:

- Requirements/needs analysis
- Information Technology plans/feasibility studies
- Network planning and design
- System configuration, integration and installation
- Knowledge assistance and transfer
- Hardware and software selection and procurement
- Post-installation support and enhancements
- System software support
